

**Moisturising eye drops with Sodium hyaluronate 0.3% solution****What are Xailin® Intense eye drops?**

Xailin® Intense is a sterile solution of sodium hyaluronate 0.3%.

What Xailin® Intense eye drops are used for?

Xailin® Intense is indicated for intense hydration of the eyes due to ocular dryness caused by the negative influence of the surrounding environment. Disorders such as dry eye, sensations of a foreign body in the eye, burning of the eyes as well as discomfort after eye surgery.

Why should you use Xailin® Intense eye drops?

Xailin® Intense eye drops should be used in states of tear deficiency (so-called "dry eye syndrome"), which are accompanied by symptoms such as dry eye, burning or tired eyes. These symptoms can be caused by prolonged screen use, watching television for long periods, dry air in heated or air-conditioned places or cigarette smoke. Decrease in the secretion of tears can also occur as a result of surgery or eye injuries, so that the process of regeneration of the surface structures of the eye is carried out properly, constant hydration is needed. Xailin® Intense contains a high concentration of sodium hyaluronate to provide long-lasting moisturisation to the cornea and conjunctiva of the eye.

Sodium hyaluronate is a viscoelastic liquid that has hygroscopic properties and plays many important roles in the human body. It is a naturally occurring lubricant consisting of a biocompatible polysaccharide that has excellent water retention properties. Hyaluronan in the eye is found in the vitreous, tear gland, conjunctiva, cornea and tear fluid. Sodium hyaluronate solutions have been widely and successfully used in ophthalmology around the world for many years. Sodium hyaluronate has the property of forming a stable moisturising film on the surface of the eye. Due to this, just one application can provide hours of improved comfort for those who experience the effects of dry eye syndrome, as well as those who wear contact lenses.

Who are Xailin® Intense eye drops intended for?

Xailin® Intense eye drops are indicated for children over one month of age and adults.

How often should Xailin® Intense eye drops be used?

Xailin® Intense eye drops can be used daily, including with all types of contact lenses, as the drops do not contain any preservatives. It is recommended to apply one drop into the conjunctival sac of the eye 3-4 times a day. You can apply more often if needed.

Composition:

Sodium hyaluronate 0.3%, glycerin, sodium chloride, boric acid, sodium tetraborate, calcium chloride, potassium chloride, magnesium chloride, highly purified water.

How to use Xailin® Intense eye drops?

Xailin® Intense eye drops are for external use only to be applied to the conjunctival sac of the eye.

1. Prior to administering the preparation wash hands thoroughly.
2. Remove the cap and apply into the conjunctival sac of the eye. Do not touch the surface of the eye with dropper tip.
3. Tilt your head back slightly.
4. Hold the bottle face down (vertically).
5. Pull your lower eyelid down slightly, pressing the bottle, squeeze one drop into the conjunctival sac.
6. Close your eyelids and spread the drop across the eye surface by blinking.
7. Repeat the same activities for the other eye.
8. Put the protective cap on the dropper after use. During applying, be careful not to touch the surface of the eye and eyelid with the tip of the dropper.
9. After applying the drops, do not rinse the surface of the eye with water or any other liquid.
